# Cable End Fitting Selection

Tick the box of the cable fittings you require at each end of your cable. Then email completed form to sales@samsfitness.com.au

# Cable Measurement

Enter the relevant measurement for your cable.

Email completed sheets to sales@samsfitness.com.au

# Cable Fitting Sheet

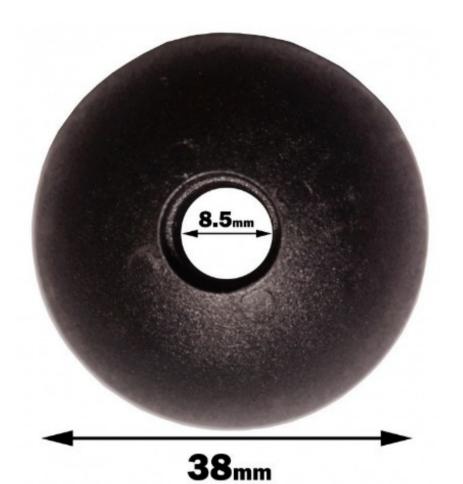

#### **Z-CB-EYELET - Gym Cable Swage Eyelet.**

These are used for attaching your cable attachments like lat pulldown bars or tricep ropes. Alternatively you use the more attaching the cable to the gym.

#### Z-CB-BOLT - Cable Gym Bolt M12

This bolt is an M12. This won't work on a gym that uses a different type of bolt. How do you know if your bolt is M12? If a M12 nut goes on, it is M12. If you still aren't sure, it is probably easiest to send us your cable. If it is an M12 we can replace. If not, we will use your bolt.

#### Z-CB-BALL38 - Gym Cable Ball 38mm

This is a 38mm Ball for the end of gym cables. These stop the gym cable from going back up through the outlet. The inside hole is 8.5mm.

### Z-CB-BALL25 - Gym Cable Ball 25mm

This is 25mm ball for gym cables.

### **Z-CB-RUBRING - Rubber Ring**

This is a small rubber ring which we use to hold your balls in place. This is mainly for low cables where you do exercises like bicep curls. When you are pulling up your gym cable ball wont slide down.

## **Z-CB-STOP - Cable End Stop**

These are used to secure certain cable fittings, like the cable bolts in place.
